

REI CASE 2

PART B

Roxanne returns to your office to discuss the results of her laboratory tests:

Test	Result	Reference Range
B-HCG (mIU/mL)	1	<6 = negative
TSH (mIU/mL)	2.49	0.4000 – 5.000
Prolactin (ng/mL)	6	<25 premenopausal

After her Provera withdrawal, she had one day of light bleeding.

Case Questions:

1. What is your suspected diagnosis at this time?
2. Do you need to do any further testing?
3. What is your next course of action?
4. What would you do next if she had not bled in response to the Provera?
